

How to find the settings needed

config/settings.json

```
{
  "platformVersion": "<OS_VERSION>",
  "deviceName": "<DEVICE_NAME>",
  "udid": "<UDID>"
}
```

platformVersion

The OS version of the test running device. For example: Android **8.1** or iOS **13**

deviceName

The model of the test running device. For example: **Pixel 3XL** or **Galaxy S10**

udid

Can be found by typing a command

Dependency : **SDK Tools**

- Step 1 : plug the device on your computer (USB)
- Step 2 :
 - (Windows) do **ctrl+R** and type **cmd**, then type this command
 - (Linux & Mac) open the terminal and type this command

```
adb devices
```

- Step 3 : Retrieve the udid code under **List of devices attached**
